| | Yes, I would recommend this website |
| | for Stephanie as it is a great resource. |

Further comments:

What components of the site are most useful?

- The website is clear, allows for users to gather useful information, and some sections are also translated into Spanish. The site has good visual aesthetics with pictures and a modern web design, but at times the website does appear to be over-crowded with text, animations, and videos.
- The website has an extensive information on back and neck pain and related conditions. There are multiple subpages on different conditions, prevention, treatments, wellness, forums, a blog, and finding a medical specialist.
- The components of the site that are most useful are the conditions and wellness subpages. The conditions subpages provides users with information on a variety of common back and neck pain conditions, including causes, treatment, prevention, and exercises to help users better understand their medical condition. The wellness subpage is a combination of topics on ergonomics, exercises, diet, sleep, and positive lifestyle choices.

Do you think an OT colleague of yours would need a lot of former knowledge to use the website?

 No, this website is fairly easy to navigate even for an inexperience internet user so an OT colleague of mine would not require a lot of former knowledge to use the website. The website is overall well organized but on occasion can be overly dense.

Are there tools and resources in the website that would be useful for the person in the case? If not, what else should have been provided?

• This website is useful for Stephanie because the website provides her with general information about neck pain and upper back pain. More importantly there are webpages on neck exercises, stretches, and strengthening exercises to help relieve neck pain accompanied by upper back pain caused by postural problems. These webpages are a great resource for Stephanie as the exercises are clearly explained in text but are also accompanied by illustrations of the exercises; as well the duration and repetitions of the exercises are clearly laid out. There is also a section on ergonomics that can provide Stephanie with guidelines on good posture and office ergonomics that can help prevent work-related neck and upper back pain. Finally, a great feature about this website is that Stephanie can easily find the subsection on neck pain by simply searching it on the search engine on the top-right-hand corner of the website.
